CUSTOM HARDWARE SPECIALISTS

Much of Sierra Pacific's revenues come from parts not shown in this catalog.
These are proprietary items made to customer specifications.

Sierra Pacific Engineering and Products offers custom hardware design and engineering services to help you get the right custom part for your needs. This manufacturing design guide outlines what to expect while partnering with SPEP to develop a new item. We have optimized our engineering design process to have the perfect balance of being responsive to your needs and maintaining the highest level of detail.

Whether we are making custom latches, unique handles or any other specialty part, our top priority is to deliver the right part at the right time for the right price. Therefore, we begin by qualifying the potential project to confirm it makes mutual business sense in terms of volumes, timeframe, and other expectations. Once the scope of work is understood, we will outline any potential costs for design services if required. For most high volume projects, development costs are waived with the commitment of a production order upon completion of acceptable design work. We are happy to work with you to find the right solutions that will work for your budget.

Why Choose SIERRA PACIFIC for your next custom hardware requirement?

- ISO 9001 Certified
- Assisted by the latest CAD and FEA technology.
- In-house FUSED DEPOSITION MODELING (FDM) and STEREOLITHOGRAPHY (SLA) allows us to convert your vision into a prototype within days.
- Experienced Industrial Design team ready to assist with your challenge.
- We have satisfied the requirements of Fortune 500 companies
